

## Anaconda

### Anaconda Navigator

- Download and install anaconda navigator from <https://www.anaconda.com/>.

### Create environment:

1. Open "Anaconda Navigator"
2. Navigate to "Environments" on the left.
3. Click on "Create" on the bottom left.
4. Select Python and some distribution installed (anything > 3.6 is fine).

### Packages:

1. Open "Anaconda Navigator"
2. Navigate to "Environments" on the left.
3. Select the environment where the package needs to be installed
4. Click on the "play/pause" button present on the environment name
5. Click "Open terminal" from your environment.
6. Confirm installation.
7. After installing go back to Navigator and the environment and click "Update index".

## Git

### Install:

- <https://git-scm.com/book/en/v2/Getting-Started-Installing-Git>
- <https://git-scm.com/downloads>

### How to use git:
